A. No-effect certificate (Section 3.2)
a single action outside a batch, on a level not marked hidden-state; frame unchanged outside the display band
certificate issued; key masked from the model's list (unless the list would be empty)
a later execution contradicts it: certificate falsified and revoked; the level's other certificates voided
trigger (i)
level marked hidden-state: no further certificates on it; no-op notes in the prompt downgraded to “not a proof”
a death after a no-op (i), or on an action K had considered safe, or at the life budget (ii)
K reopens tested actions: the level's certificates revoked, keys back in the list
K relearns the display mask and reindexes: all certificates revoked
revocation without falsification; the level is not marked
B. Where K acts (Sections 3.1 and 5)
Mode 1, playing
K takes turns on named triggers: it controls part of the play
LLM agent
K
game
Mode 2, advising
K certifies, prunes, and annotates; it only influences the model's choice
LLM agent
K
observes
game
Mode 3, last resort
prompt and list as in the base; K plays only in a final window
LLM agent
K
game
Control and influence as in Gharajedaghi (2011, p. 31).
